Newari - Expert

SUMMARY

I am a Full Stack Developer with experience in PHP, Javascript, Laravel, Vue.js, MySQL, Node.js, React.js, MongoDB, WordPress, and Voyager. CSS frameworks like Bootstrap and Tailwind, version control such as Git. One of my biggest achievements was finishing the project named WorldVision on time, even with the challenge of handling large amounts of data. I'm motivated by solving problems and always aim to deliver high-quality, scalable solutions.

EDUCATION

BSc (Hons) Computer Science

Herald College Kathmandu / Kathmandu / September, 2018 - September, 2021
I choose BIT as my study field since I am interested in programming. The journey to learning many new things about modern technologies was very fantastic. Additionally, I have done number of projects throughout my time in college, including a simple e-commerce website, a mobile application for restaurant management, a gpa converter, and a motorbike recommendation system for my final year project.

WORK EXPERIENCE

Mobile Application Developer

IMS Software Pvt. Ltd. / Tripureshwore, Kathmandu / February, 2019 - May, 2019
I began my internship as an Android Developer, where I learned to troubleshoot and resolve minor issues within Android apps. During this time, I also developed a small project, such as a GPA calculator or a date converter, to further enhance my skills.

Frontend Developer

PAS(Perfect Active Solution) / New Baneshwor, Kathmandu / June, 2021 - December, 2021
I work as a Front-End Developer, designing projects using HTML, CSS, JavaScript, Bootstrap, and Vue.js. I've also created several websites for government and college projects.

Laravel Developer

Ramlaxman Innovations / Lazimpat, Kathmandu / January, 2022 - September, 2022
As a Full Stack Developer, I created foundational projects using Bootstrap, Vue.js, and Laravel for the backend. These projects utilized new Vue.js features like the Composition API and Vue Router, and included interactive maps. Additionally, I gained valuable knowledge in Laravel for building APIs and maintaining a clean, structured codebase.

Laravel Developer

Krizmatic Digital Solutions / Sanepa, Lalitpur / November, 2022 - Present
As a Full Stack Developer I've had the opportunity to independently handle full projects from start to finish, including the deployment process. I've also worked on application-level projects, gaining hands-on experience in managing all aspects of development and deployment.

PROJECTS INVOLVED

World Vision

This project, related to world data, is built with Laravel for the backend and uses jQuery, Bootstrap, custom styles, and Leaflet maps for the frontend.

https://projects.krizmatic.com.au/globaldata/

African Transition Index (ATI)

This project, focused on world data, is built with Laravel for the backend and uses React along with Highcharts for maps and charts on the frontend.

https://ati.krizmatic.com.au/dashboard/ati

Bizz Education

This is a consultancy website built with Laravel using Voyager for the backend, and Bootstrap, jQuery, and custom styles for the frontend.

https://bizzeducation.com/

Omoda & Jaecoo Nepal

This is a EV website built with Laravel using Voyager for the backend, and Bootstrap, jQuery, and custom styles for the frontend.
